

GET UNDERFLOOR HEATING NOW

*Heating, Ventilation and
Air Conditioning
Engineering Specialists:*

*We can design and install an underfloor
heating system to fit your
needs and budget.*

*We will design and install all your
heating and air conditioning needs,
pool heating and hot water systems.
We provide your full
thermal package.*

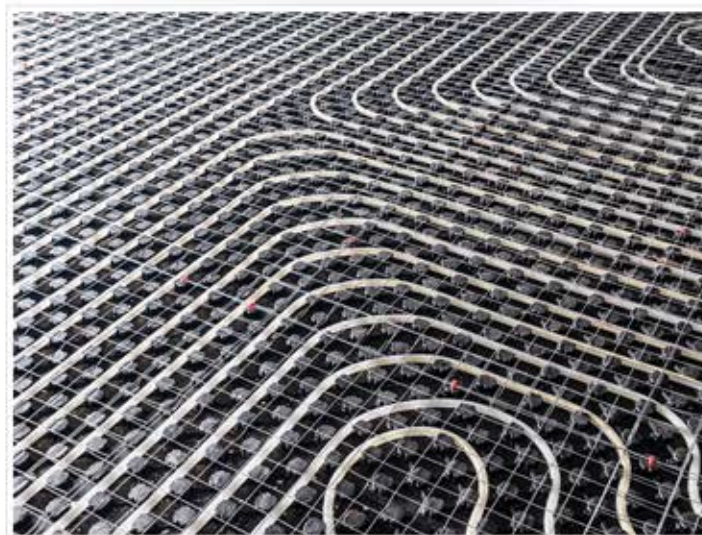

OR

*Retrofit an underfloor system into
your existing home*

UnderFloor Heating

The perfect way to heat a Kiwi home

By controlling the warmth of your room's surfaces and objects a cosy natural balance between room and body temperature is established, now you are feeling warm. Radiant heat is the most comfortable, efficient, healthy and cheapest to run of all the home heating options.

Comfortable because unlike convection methods radiant floor heating systems conduct heat through the floor which is broadcast as heat energy waves to every object in the room, especially you...

Efficient because radiant heat is only felt when the energy wave strikes another surface, eliminating air currents and cold surfaces...

Healthier because heated air isn't being forced to move through the home so less dust, mould and mites are distributed, helping keep allergies and other ailments to a minimum...

Cheaper because thermostatically controlled water temperature can be finely set to provide exactly the radiant heat energy required. And cheaper because air is not being heated and lost to colder air

Eco-friendly Greenhouse gas emissions are minimised due to efficient use of Energy.

Aesthetically pleasing All of the heating installation is invisible - no vents or ducts.

Silent All underfloor heating operating systems are completely silent.

Low Maintenance No maintenance or cleaning - simply turn on and enjoy.

Tested and proven for over 2000 years. The idea of using radiant heat to gently warm a large floor surface at a low temperature was mastered over 2000 years ago by the Romans.

While the technology has changed over the years, the concept is as sound as it ever was; heating a large area at a modest temperature (21-25°C) produces the most comfortable and efficient form of heating possible.

Choose your own energy source; solar, boiler, wet back, geothermal... its up to you. Or we provide advise for your situation.
